Lose the Wires... Not the Signal

Reliable
Monitoring & Control
with
Phoenix Contact

Phoenix Contact's large and growing family of wireless radios give you multiple options to monitor and control operations using industrial-grade technology.

Single or bi-directional, point-to-point or point-to-multi-point, our radios are all designed for industrial applications. From in-plant applications to remote monitoring in the harshest environments, Phoenix Contact's Wireless Interface and Data modules provide reliable transmission with no programming required.

Our Wireless Interface products offer up to 34 analog or 68 digital signals to monitor & control level, flow, pressure, alarms & temperature- all eliminating the cost of cable, conduit trenching and boring.
